“Things that do not pop-up require several eye movements to find, with eye movement taking place at a rate of roughly 3 per second. [...]

These may seem like small differences but they represent the difference between visually efficient at-a-glance processing and cognitively effortful search.

Personal Care Aide Jobs Almost Triple in a Decade

The graph below shows the seven jobs that experienced growth of over 100% in the last 10 years.

Fastest Growing Jobs in the US

Brought to you by **COMMERCIALCafe**

Personal Care Aide jobs rose 251% in the last 10 years, reaching over 2.2 million jobs. As the US population ages and the Baby Boomer generation retires, more jobs in healthcare will continue to be needed.

Driving Shifts Into Reverse

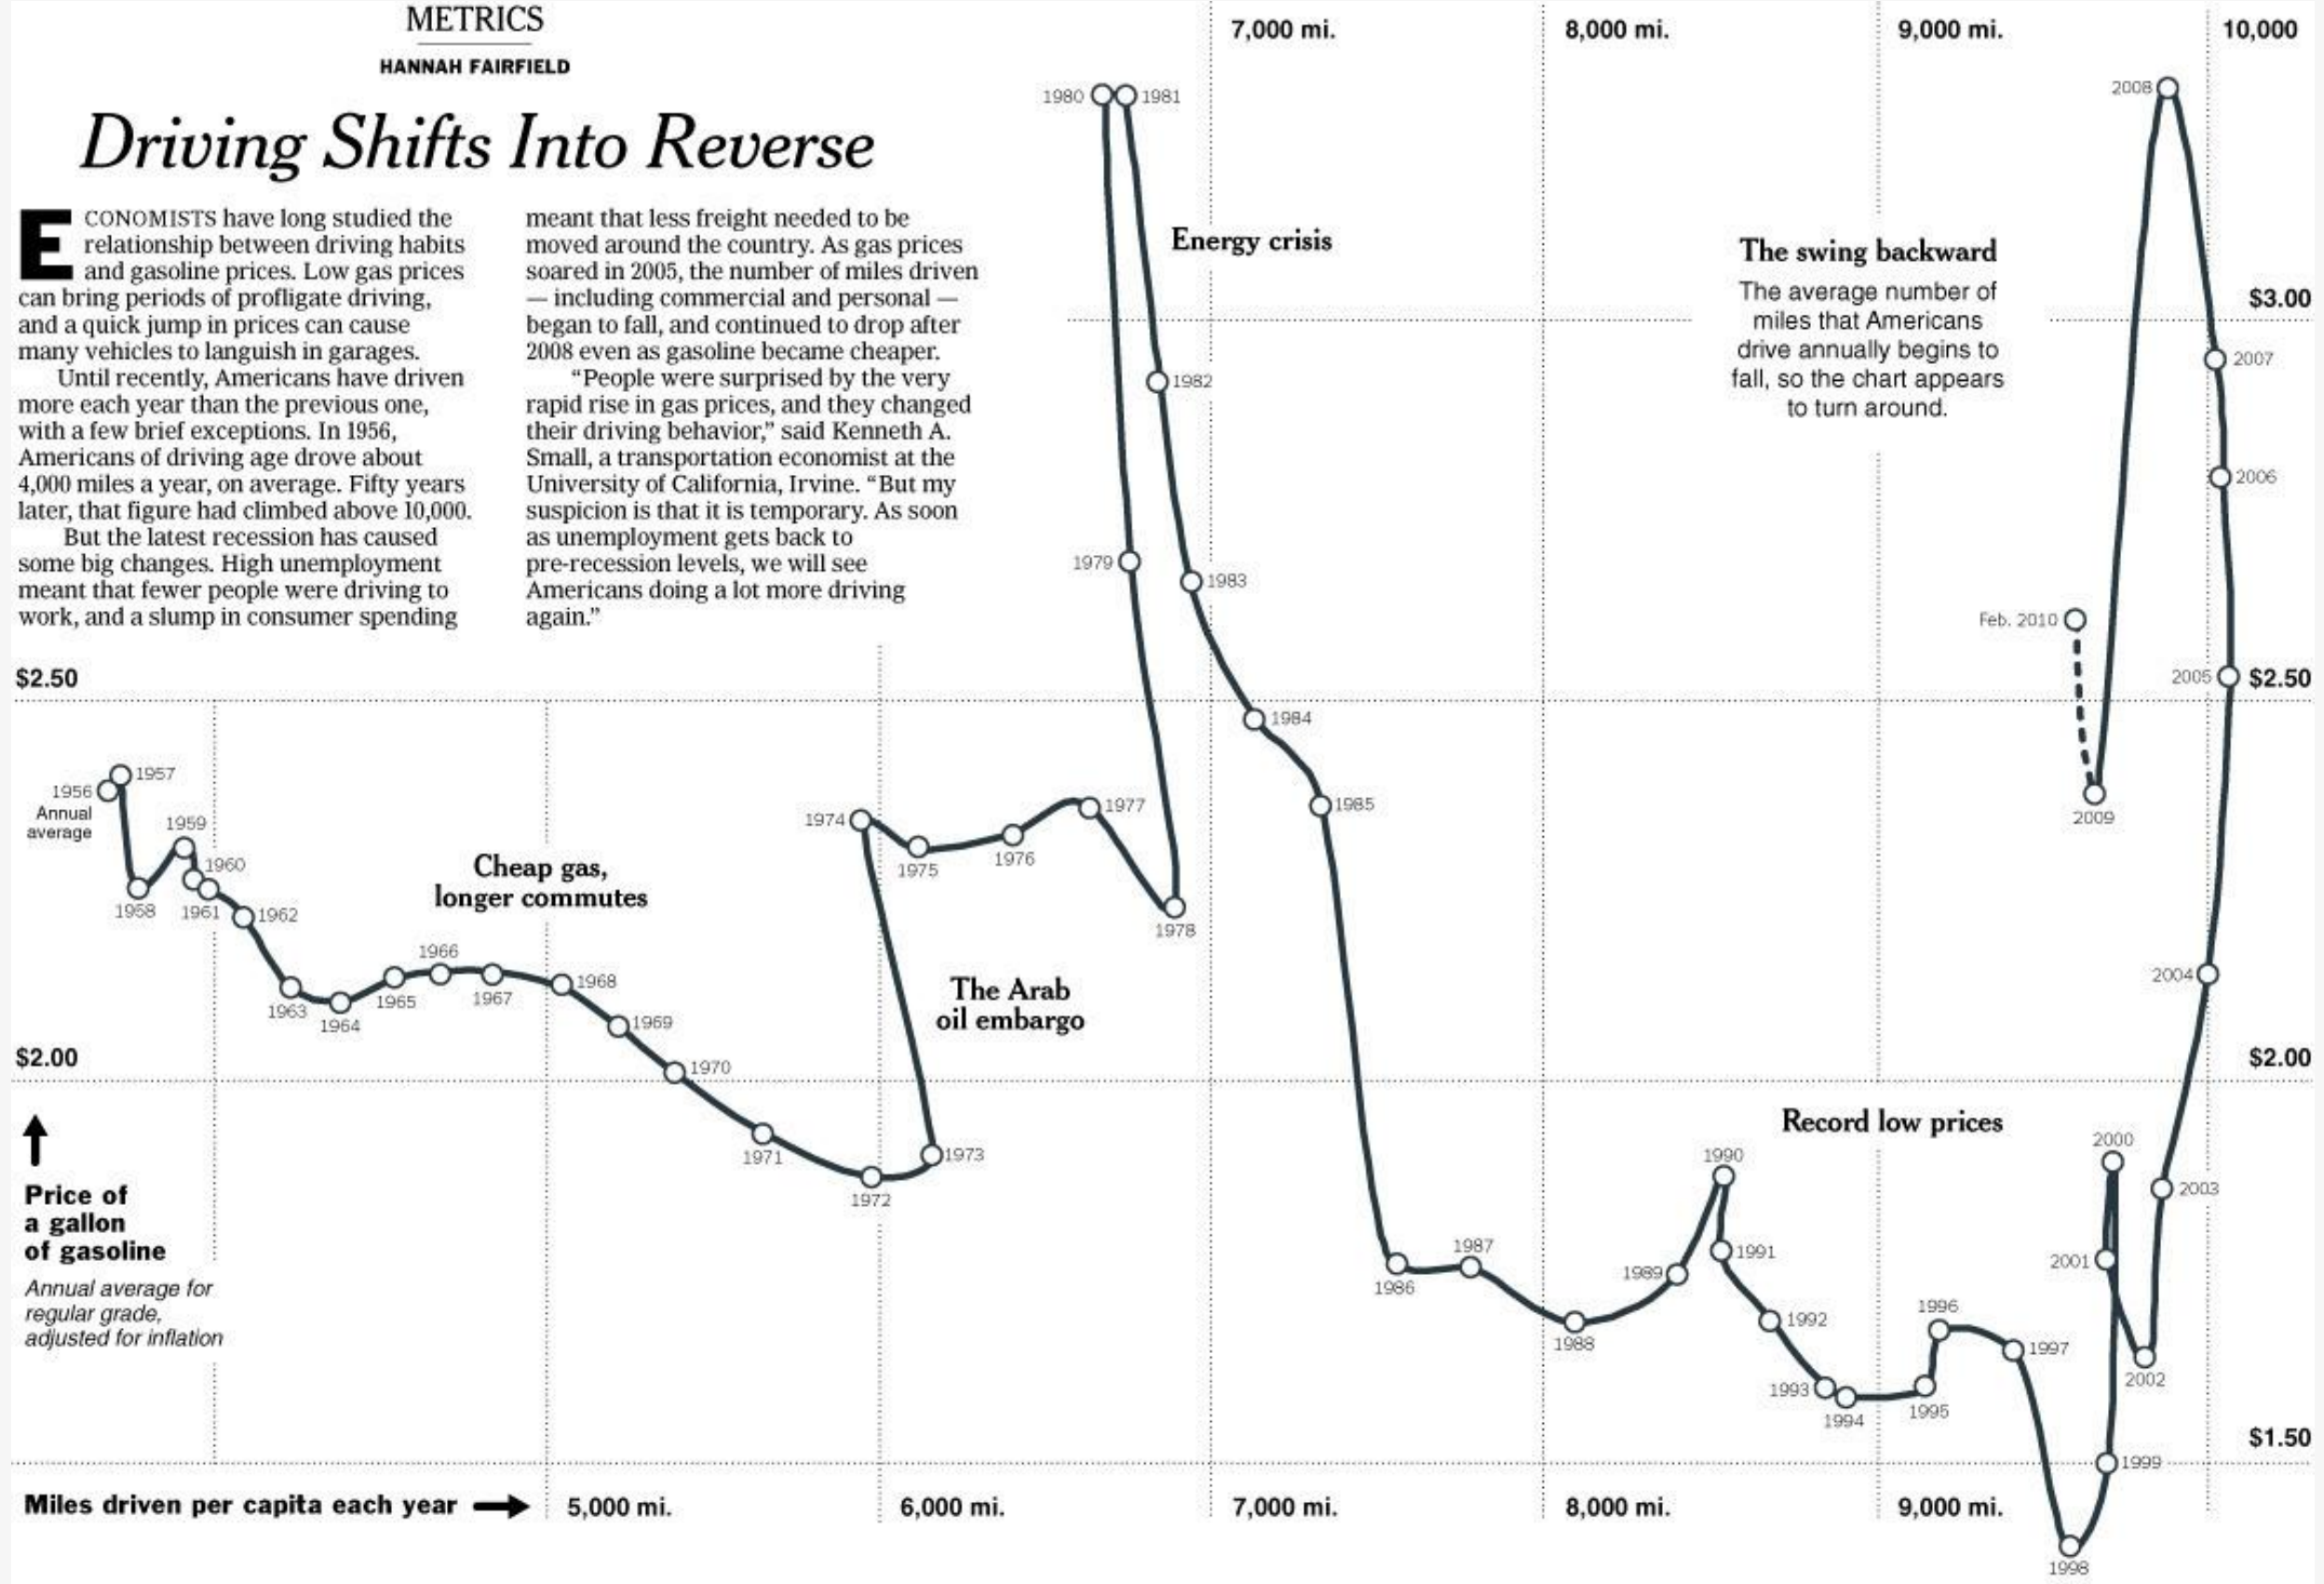

ECONOMISTS have long studied the relationship between driving habits and gasoline prices. Low gas prices can bring periods of profligate driving, and a quick jump in prices can cause many vehicles to languish in garages.

Until recently, Americans have driven more each year than the previous one, with a few brief exceptions. In 1956, Americans of driving age drove about 4,000 miles a year, on average. Fifty years later, that figure had climbed above 10,000.

But the latest recession has caused some big changes. High unemployment meant that fewer people were driving to work, and a slump in consumer spending

meant that less freight needed to be moved around the country. As gas prices soared in 2005, the number of miles driven — including commercial and personal — began to fall, and continued to drop after 2008 even as gasoline became cheaper.

“People were surprised by the very rapid rise in gas prices, and they changed their driving behavior,” said Kenneth A. Small, a transportation economist at the University of California, Irvine. “But my suspicion is that it is temporary. As soon as unemployment gets back to pre-recession levels, we will see Americans doing a lot more driving again.”
